Sciences and the Humanities – Integrated Method

By Shomit Sirohi

I. A, B and C

Science is in fact pure science, like biology, physics and mathematics – but then there is the humanities, and then that is scientific or social scientific and then they integrate on the bias of science.

II. Critique of Political Economy between Moishe Postone and Sirohi

A – There is abstract time, as an independent variable.

B – there is commerce and finance which accrues.

C – there is scientific mediations to finance – and that is in Marx – Time and temporality.

III. Science in a Image of Literature

There is a person buying a microwave – Maxwell’s equation on heat – then he buys that object or commodity and spends money for it.

Now A, B and C of this image – first there is Maxwell’s equation

as science, then there is the humanities of it, that this leads to spending money and that accrues as a profit and has legal regulations – and C it integrates such as – “labour on a Tandoor, as an Indian speaking man who is Jewish in eccentricities proves that it is an invention again on Maxwell’s equation but in fact the expenditure is a ratio as well then”

So we mean humanities and science is integrated. That is a production of truth.
